

# INTEL-IRRIS

Intelligent Irrigation System for Low-cost Autonomous Water Control  
in Small-scale Agriculture

# INTELLIGENT IRRIGATION SYSTEM FOR LOW-COST AUTONOMOUS WATER CONTROL IN SMALL-SCALE AGRICULTURE

## Building the Intel-IrriS LoRa IoT platform Part 3: the INTEL-IRRIS starter-kit

Prof. Congduc Pham  
<http://www.univ-pau.fr/~cpham>  
Université de Pau, France

# INTEL-IRRIS starter-kit

- "Intelligent Irrigation in-the-box", "plug-&-sense"
- From idea to reality!

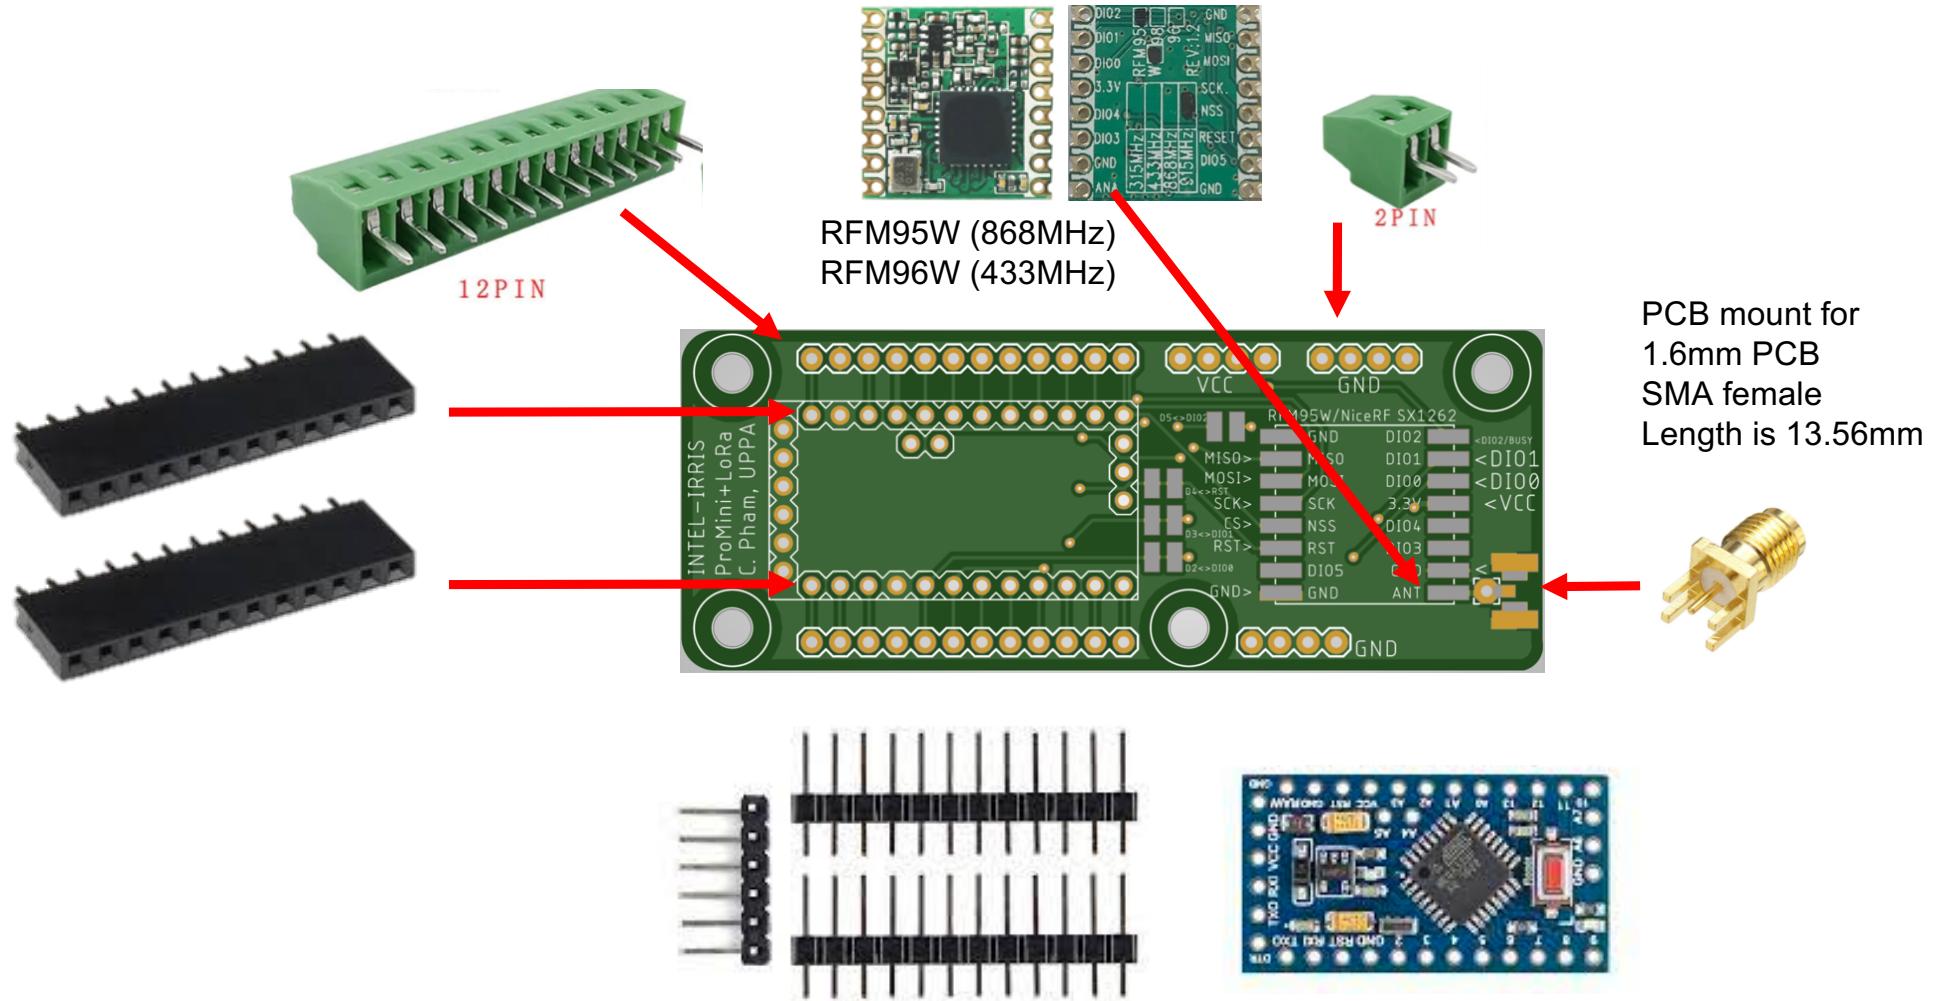

# Preparing the starter-kits at UPPA

This non-technical video shows  
the preparation of the kits  
<https://youtu.be/5nznRcloe40>

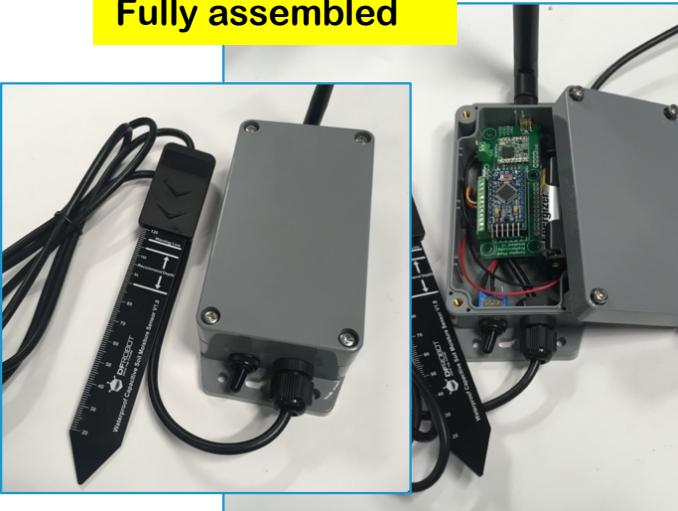

# Soil sensor: electronic parts starter-kit version

# Soil sensor device

Fully assembled

Packaging in enclosure

To be assembled

# 2 versions of the soil device

A soil temperature sensor can be added

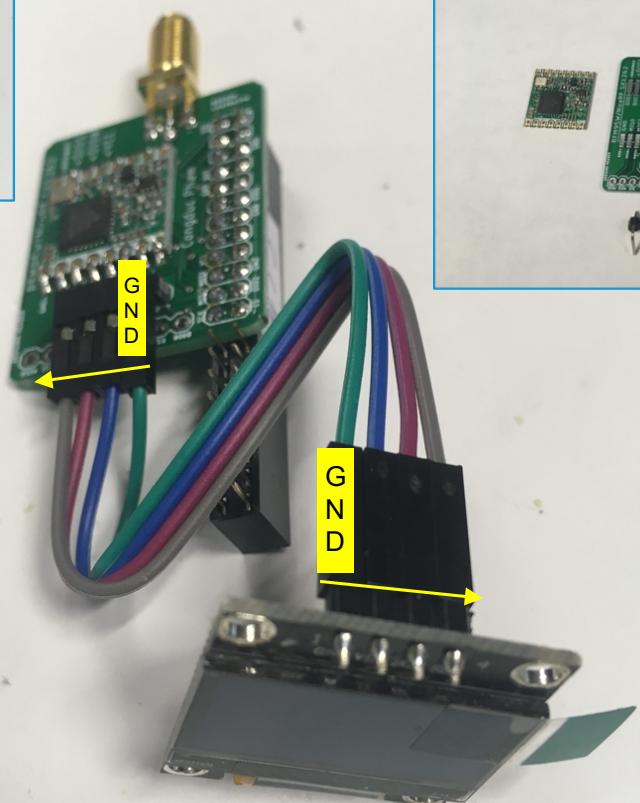

SEN0308  
capacitive sensor

Watermark WM200  
Water tension sensor

# Gateway (WaziGate)

Fully assembled  
LoRa radio hat

To be assembled

An optional OLED screen can be connected to the radio hat

Check the pin order

# First round of starter-kits

- 1 fully assembled & configured soil sensor device
- NEED TO INSTALL 2-AA BATTERIES
- 4 soil sensor devices to be assembled & configured
- 1 fully assembled radio LoRa hat
- 4 radio LoRa hats to be assembled
- INTEL-IRRIS WaziGate image to be downloaded & flashed
- **IMPORTANT**
  - 1 starter-kit= 1 soil sensor + 1 INTEL-IRRIS WaziGate gateway
  - 1 starter-kit / farm to be deployed and tested
  - The WaziGate is **only pre-configured for 1 soil sensor / farm**
  - If there are several soil sensors in a farm, see **advanced configuration**
- **All tutorials & videos: <http://intel-iris.eu/tutorials-slides>**

# Assembling starter-kit

## Algeria (UORAN1), Morocco (ENSA Safi)

- Soil sensor device
  - [Tutorial slides on building & assembling the outdoor LoRa IoT soil sensor device](#)
  - [Video n°1. YouTube tutorial video showing how to build the IoT microcontroller platform for the LoRa IoT soil sensor device.](#)

# Preparing Wazigate

- Plug the LoRa radio hat on the Raspberry, screw in the antenna

- Download SD card image from <http://intel-iris.eu/results>
- Image uses EU433 frequency band (Algeria, Morocco, France)
- Flash SD card (min 8GB): [Video n°4 at t=124s](https://youtu.be/j-1Nk0tv0xM?t=124),  
<https://youtu.be/j-1Nk0tv0xM?t=124>, then insert SD card

# WaziGate power consumption

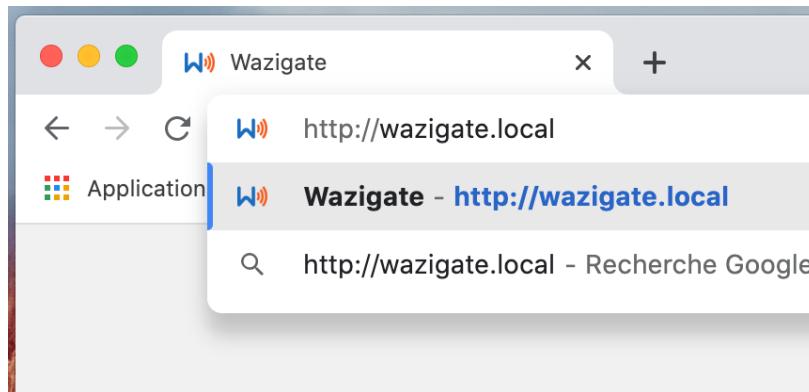

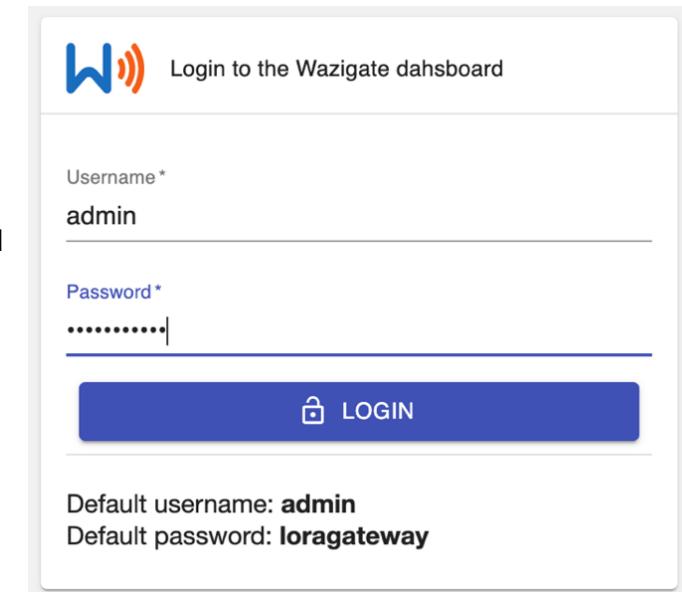

RPI3B consumes less than 300mA

However, a 2.5A micro USB charger is needed to avoid undervoltage

# Checking the WaziGate

- Power the WaziGate, no Internet is required, wait 3-4mins (boot)
- Connect to **WAZIGATE\_XXXXXXXXXXXXXX** WiFi network
  - default WiFi password is loragateway
- Open web navigator. Go to <http://wazigate.local> or <http://10.42.0.1>

Login to the Wazigate dashboard

Username \*  
admin

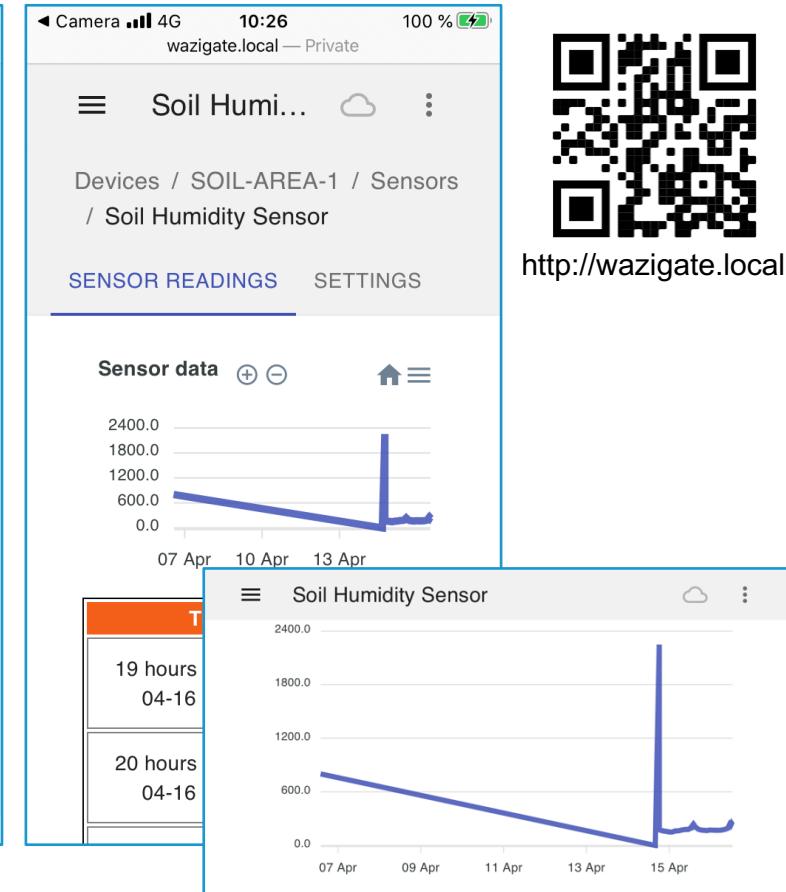

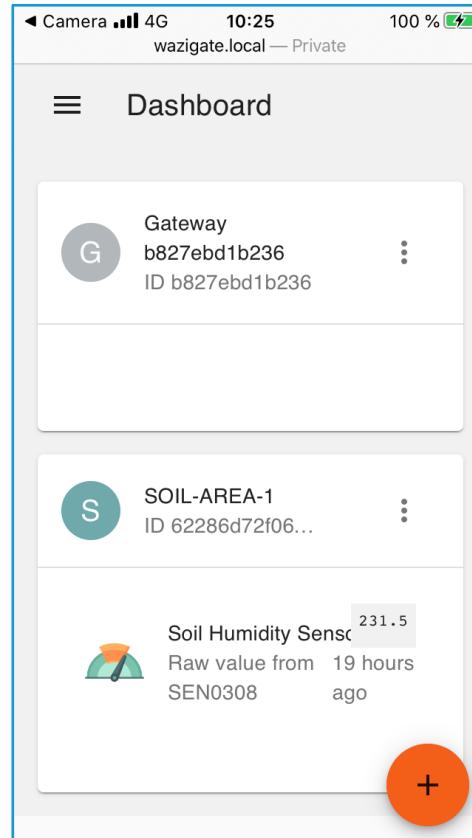

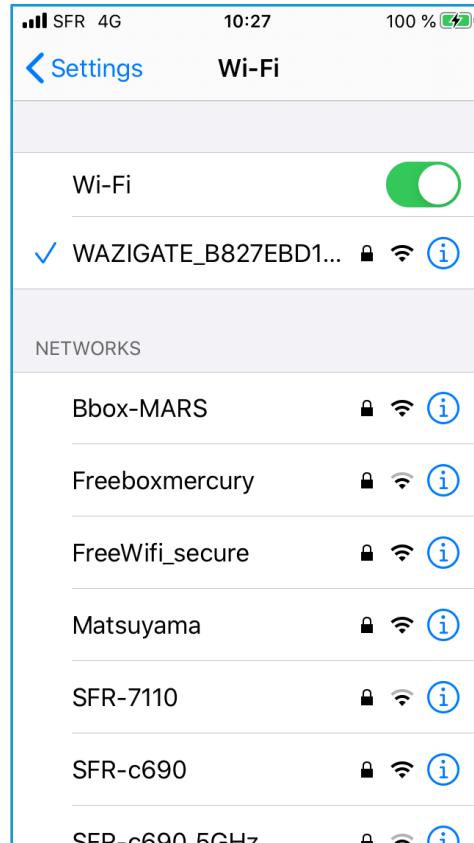

Password \*  
.....

**LOGIN**

Default username: **admin**  
Default password: **loragateway**

- Use default login to connect
  - User: admin
  - Password: loragateway

# WaziGate's dashboard

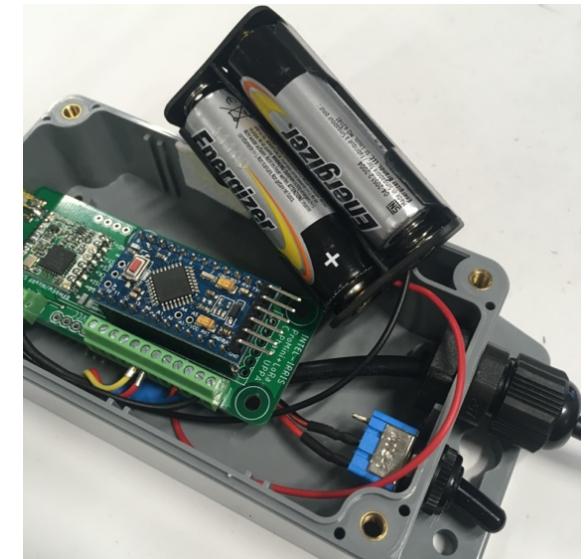

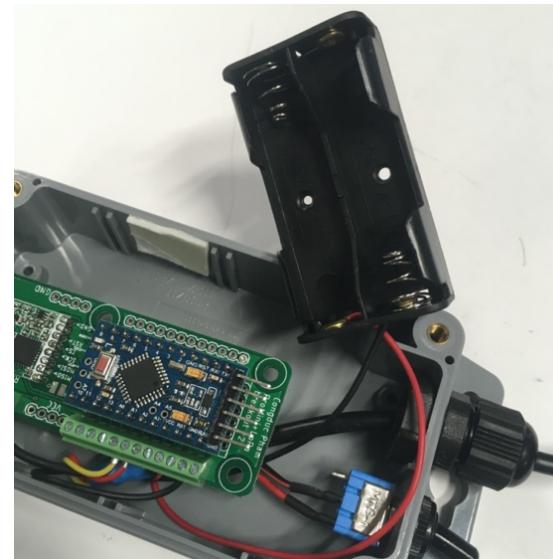

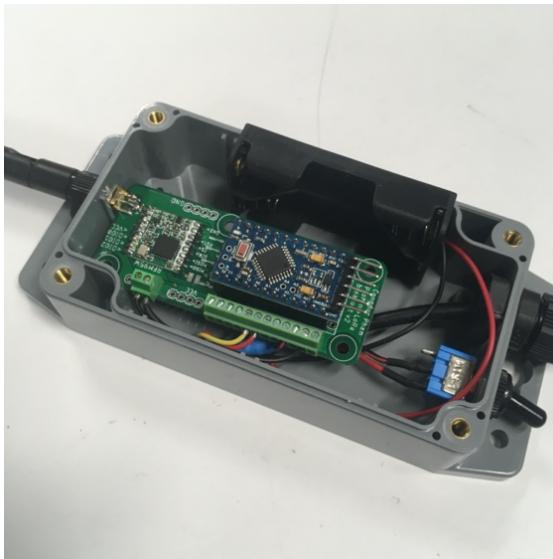

Look at [Video n°4 at t=239s](#)

<https://youtu.be/j-1Nk0tv0xM?t=239>

# Preparing soil sensor device

## install batteries

- Remove cover & install 2-AA batteries in battery holder
- Best way is to detach the battery holder

- Put back cover and be sure to tighten the cover
- Procedure is the same if you need to replace the batteries

# Take good AA batteries

- Install new & high-grade alkaline AA batteries to allow for at least 2 years of autonomy
- Take a well-known brand

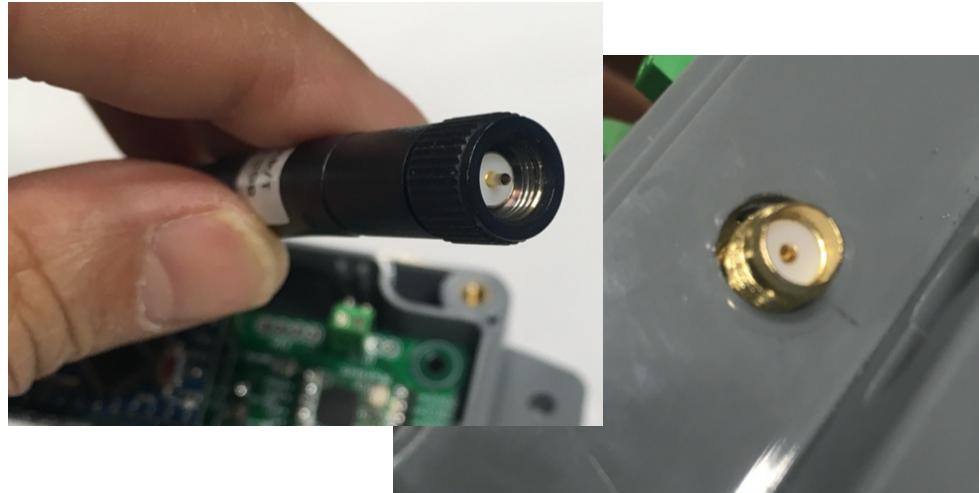

# Never transmit without antenna

- NEVER, NEVER transmit without an antenna
- Doing so can damage the radio module
- If your board is already connected to the radio module and you need to flash the board, connect the antenna
- If you need to update the existing code and your device already run a code that transmit data, connect the antenna
- It is safer when programming the device to remove the Arduino board from the PCB and program it disconnected from the radio module
- If you deploy a device, make sure that the antenna is correctly connected before powering on the device and realizing any transmission test

# Preparing soil sensor device

## screw in the antenna

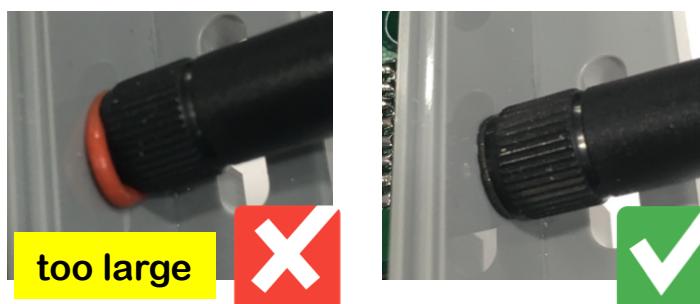

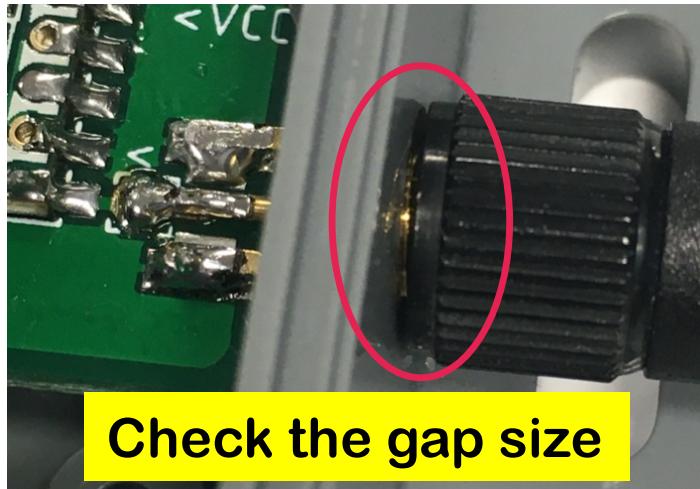

Be sure to connect the matching antenna  
Here, SMA female with SMA male antenna  
Need to screw the antenna in all the way

The antenna junction is critical because this  
is where rain water can come in

# The antenna junction

Even when the antenna is screwed in all the way, there might still be a gap

Even with no apparent gap, it is necessary to waterproof the junction

Take an o-ring for that purpose, but do not take it too thick or too large!

Too thick: the antenna will not be screwed in all the way!

There are o-ring for SMA connector but the gap size is an indication

# Do not have or can not use o-ring?

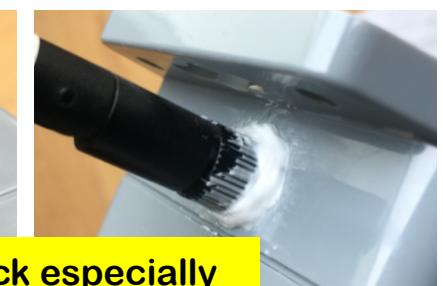

Maybe the gap is too big? Use silicon joint sealant

Put small amount of silicon around the antenna junction (use a flat screw driver or other flat tool)

Use a wet toothpick to finish and clean the silicon all around the antenna junction

check especially  
the back side

**Even with o-ring, it is safer to add silicon!**

# Put the device sticker

- Put the INTEL-IRRIS device sticker on the device cover
- See how the OFF and ON position are indicated
- You may use a waterproof marker to write the device address

# Testing transmission to WaziGate

- Test with the fully assembled & configured soil sensor device
  - Check that antenna is connected
  - Switch ON the soil sensor device to get data transmission
  - Wait for about 10s, then switch OFF the soil sensor device
  - Check reception of data on WaziGate's dashboard
  - You need to refresh the web page on the web navigator

Look at [Video n°4 at t=331s](#)  
<https://youtu.be/j-1Nk0tv0xM?t=331>

# Transmission to WaziGate

Parameters for  
INTEL-IRRIS WaziGate  
(default in red)

LoRaWAN      LoRaWAN™  
 SF12BW125  
 868.1MHz | **433.175MHz**  
 Node id is **26011DAA**  
 1 msg/60mins  
 1 sensor  
 XLPP data

This dedicated video will show all these steps, from connecting the SEN0308 to testing transmission to the WaziGate  
 Video n°4: <https://youtu.be/j-1Nk0tv0xM>

# Deploying the starter-kit (1)

- Calibrate the soil sensor device
  - See dedicated slides/videos [to come]
- Install the soil sensor device in the field
  - See dedicated slides/videos [to come]
- Install the WaziGate in the farmer's office/home/premise
  - Just power the WaziGate, no Internet is required
  - Test access to WaziGate's dashboard with farmer's smartphone
- **NEVER TRANSMIT WITHOUT AN ANTENNA**
- Test correct data reception on WaziGate
  - Switch ON the soil sensor device to get data transmission
  - Check reception of data on WaziGate's dashboard or OLED screen

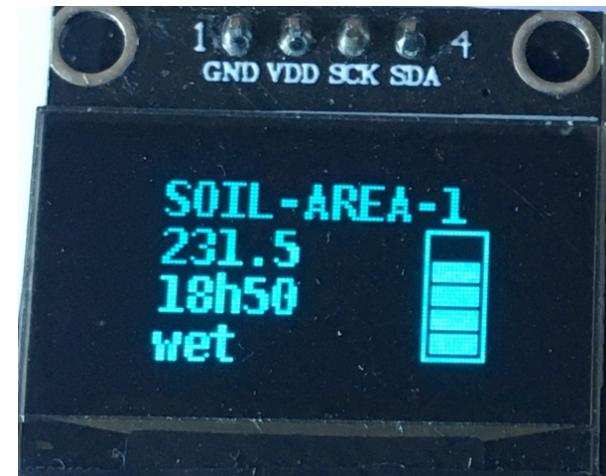

# Deploying the starter-kit (2)

- Sync the gateway clock (recommended)
  - Since the WaziGate will run without Internet access, its internal clock should be synced at the first time
  - To do so, you can use your laptop that should itself be connected to the Internet (using your smartphone's WiFi sharing feature for instance)
  - Then make sure that your laptop will share its Internet connection to devices connected on its Ethernet port. See how to do so:  
<https://www.waziup.io/documentation/wazigate/v2/install/#connect-with-ethernet-cable-to-pc>
  - **Before powering WaziGate, connect it to your laptop by Ethernet cable**
  - Then power the WaziGate and you should see the first [Internet OK] screen. Wait until the main INTEL-IRRIS OLED screen appears

# With the OLED screen

- With a small .96" OLED screen, information summary is displayed for the end-user: the device name, the time of last received data, the sensor raw value and the soil condition
- The main screen is displayed for 6s every 30s. Then a screen saver display will show a shorter version of these information with a 5-bar visual
- 5 bars: very wet | 4 bars: wet
- 3 bars: wet-dry | 2 bars: dry-wet
- 1 bar: dry | 0 bar: very dry

# QR code for connecting to WiFi

- The WaziGate WiFi is WAZIGATE\_XXXXXXXXXXXX where XXXXXXXXXXXX is the MAC address of the Raspberry
- For instance WAZIGATE\_B827EBD1B236
- With the OLED, a QR code for joining the WiFi network is generated dynamically at boot time and displayed for 10s before the main screen so that users can automatically join with a smartphone
- Then, users can scan the static QR code on the WaziGate sticker to connect to the WaziGate's dashboard or the INTEL-IRRIS WaziApp

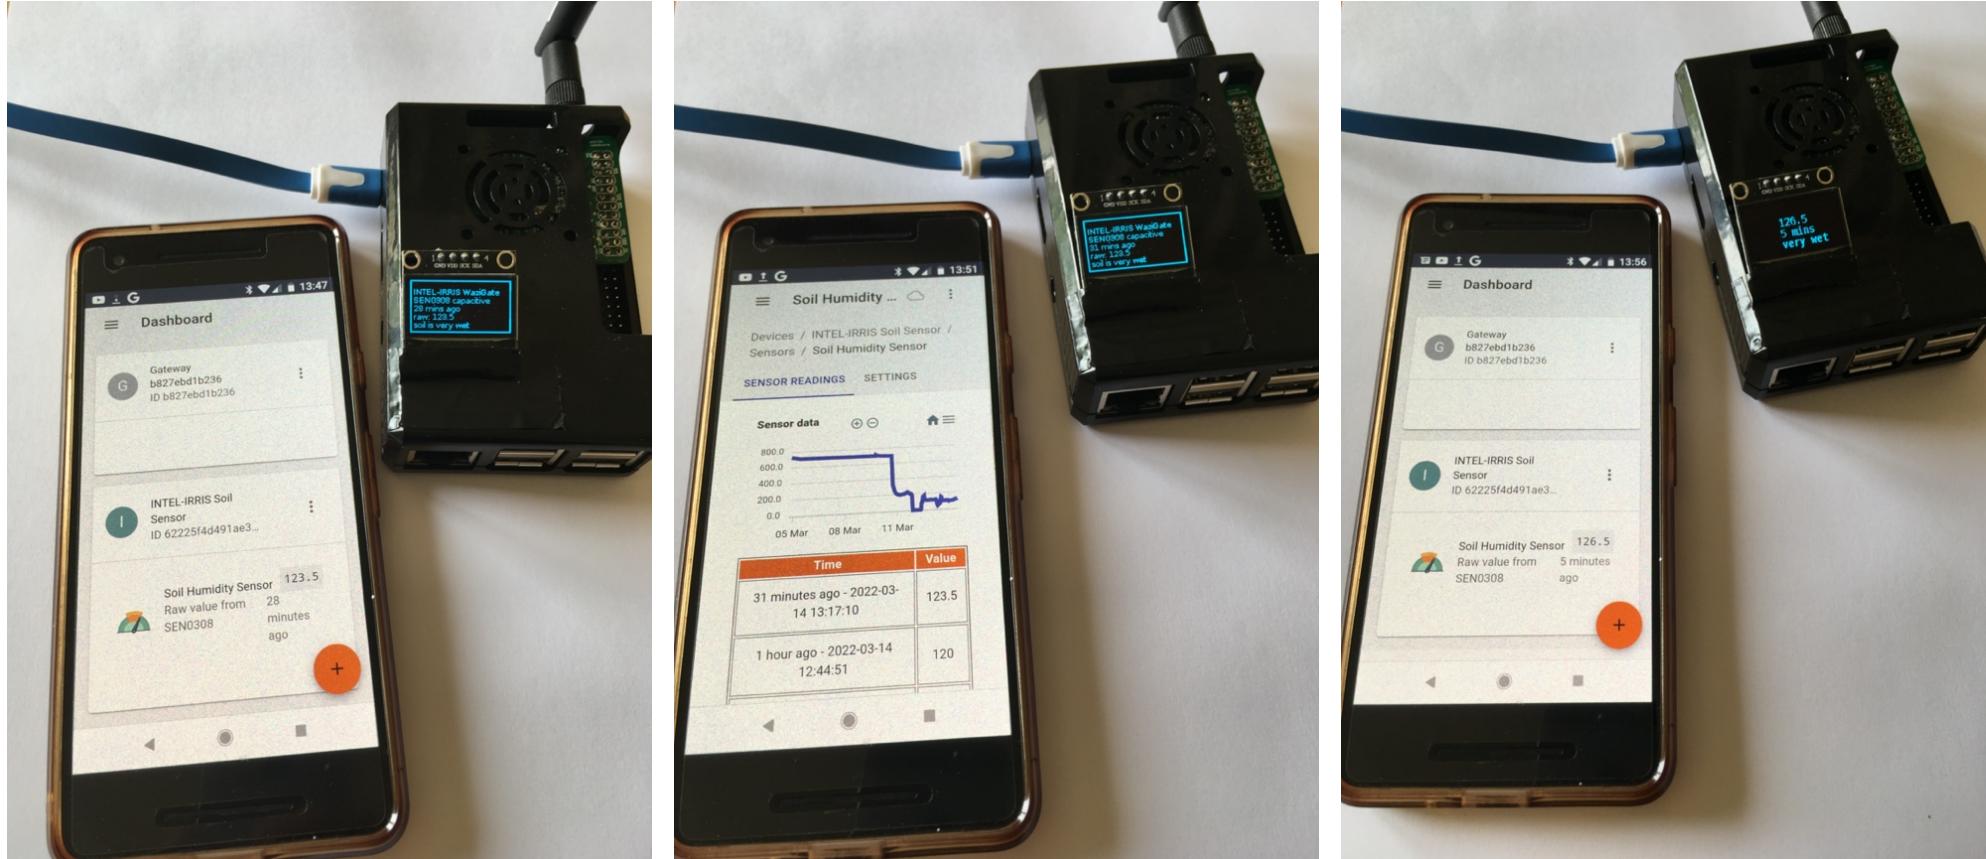

WAZIGATE\_B827EBD1B236

WAZIGATE\_DCA6325C2A7A

# WaziGate User Interface

The WaziGate provides the simple OLED interface but also more advanced features through the WaziGate dashboard and embedded application interface (WaziApp)

A dedicated INTEL-IRRIS Irrigation WaziApp is currently being developed

1/ To have several capacitive soil sensor devices

- Only to have several capacitive soil devices on 1 Wazigate – change the device address in the soil device Arduino code

Intelirris\_Soil\_Sensor | Arduino 1.8.13

```
Intelirris_Soil_Sensor DS18B20.cpp DS18B20.h RadioSettings.h SX126X_RadioSettings.h SX127X_RadioSettings.h SX128X_RadioSettings.h
181 //=====
182 //=====
183 //=====
184 //=====
185 //=====
186 //=====
187 //=====
188 //=====
189 // LORAWAN OR EXTENDED DEVICE ADDRESS FOR LORAWAN CLOUD
190 #if defined LORAWAN || defined EXTEVADDR
191 //=====
192 //ENTER HERE your Device Address from the TTN device info (same order, i.e. msb). Example for 0x12345678
193 //unsigned char DevAddr[4] = { 0x12, 0x34, 0x56, 0x78 };
194 //=====
195 //if defined WITH_WATERMARK && not defined WL_AS_PRIMARY_SENSOR
196 //Watermark soil sensor device has a different address from the default address 26011DAA
197 //26011DB1
198 //if you need another address for tensiometer sensor device, use B1, B2, B3,..., BF
199 unsigned char DevAddr[4] = {0x26, 0x01, 0x1D, 0xAA};
200 #else
201 //default device address for WaziGate configuration, mainly for SEN0308 capacitive soil sensor device
202 //26011DAA
203 //if you need another address for capacitive sensor device, use AA, AB, AC,..., AF
204 unsigned char DevAddr[4] = {0x26, 0x01, 0x1D, 0xAA};
205 #endif
206 //=====
207 //=====
208 #else
209 //=====
210 // DO NOT CHANGE HERE
211 unsigned char DevAddr[4] = { 0x00, 0x00, 0x00, node_addr };
212 //=====
213 #endif
214 //=====
215 //=====
216 //=====
```

**Default address for capacitive sensor is**

```
{ 0x26, 0x01, 0x1D, 0xAA };
```

**Just increase the last byte**

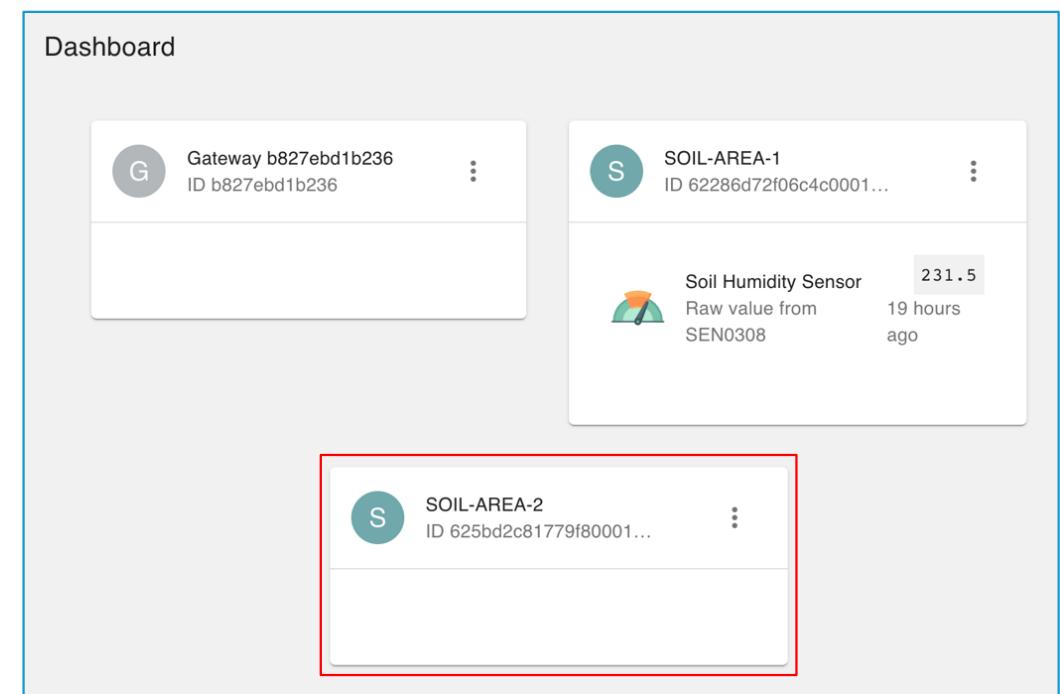

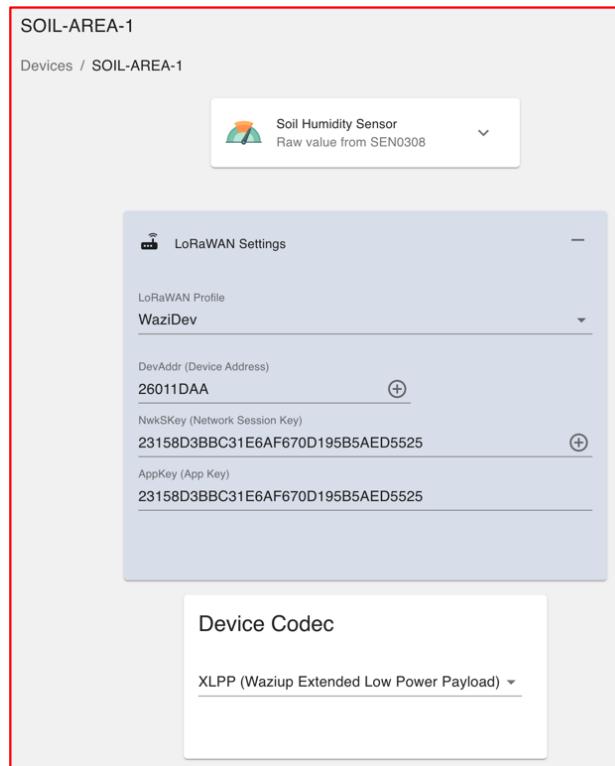

```
{ 0x26, 0x01, 0x1D, 0xAB };
```

**Compile and upload the code to the soil sensor device**

# Advanced configuration

## 1/ To have several capacitive soil sensor devices, con't

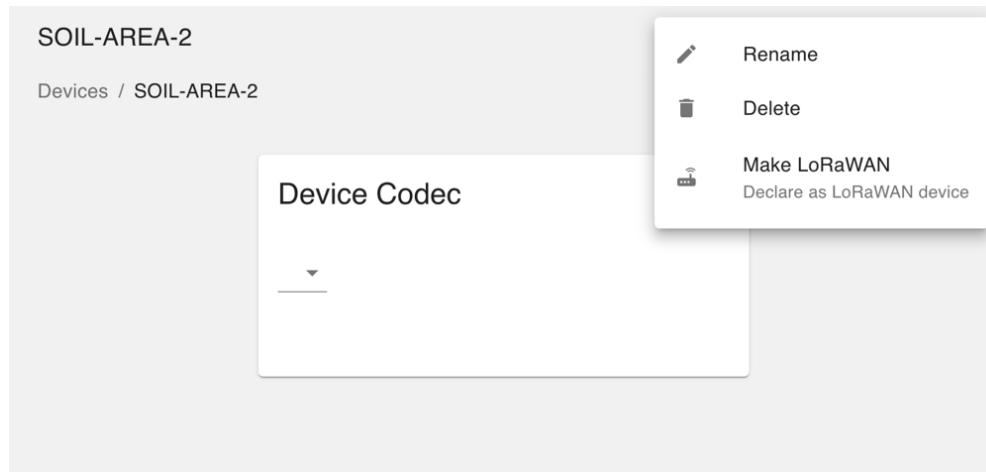

- Left figure shows configuration of the default soil sensor device
- Create a new device, e.g. SOIL-AREA-2
- Limit device name to 12 characters for correct display on OLED

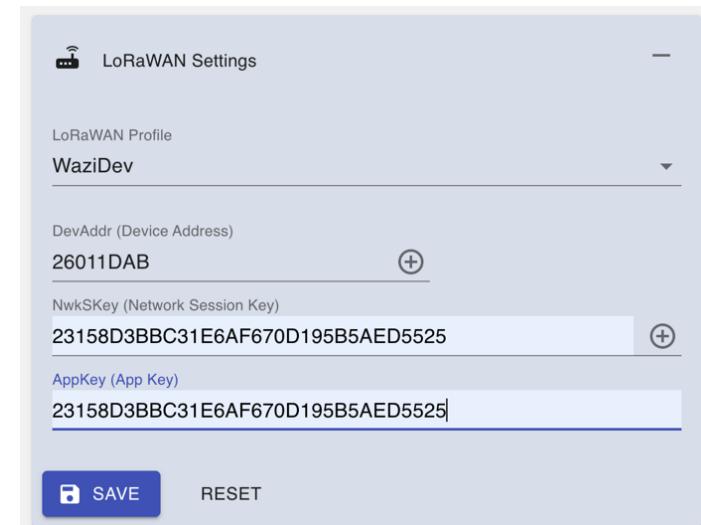

# Advanced configuration

1/ To have several capacitive soil sensor devices, con't

- Select the new device and make it as LoRaWAN device

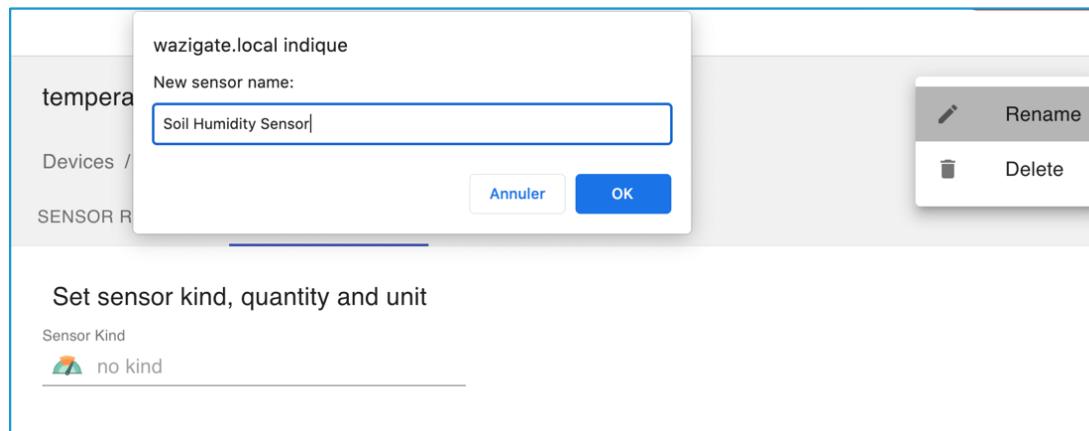

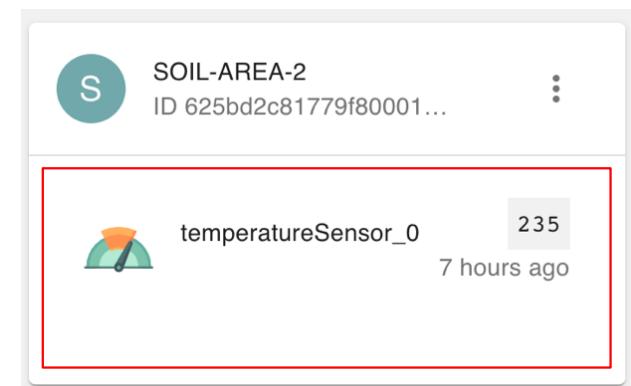

- Set the new address, **matching the one of the Arduino code**: 26011DAB
- keep same encryption keys
- Select XLPP as codec

# Advanced configuration

## 1/ To have several capacitive soil sensor devices, con't

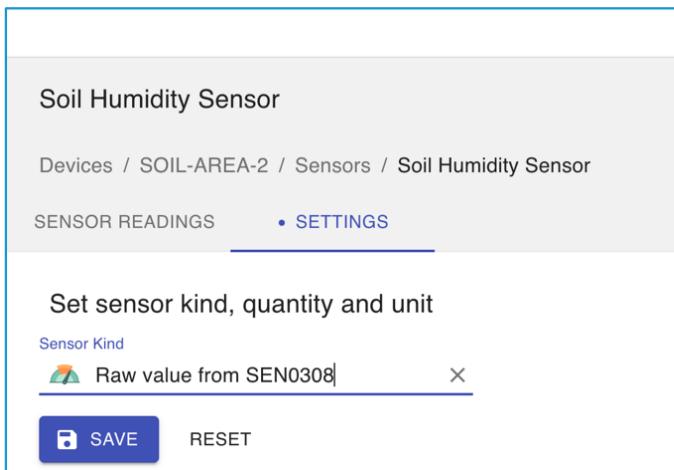

- DO NOT manually create a sensor. Instead,...
- ... power on the new soil sensor device for data transmission
- Refresh the WaziGate dashboard, the new data should appear
- New sensor name is "temperatureSensor\_0"
- Click on "temperatureSensor\_0" and then rename it, e.g. "Soil Humidity Sensor"

# Advanced configuration

1/ To have several capacitive soil sensor devices, con't

- Change Sensor kind to "Raw value from SEN0308"

Soil Humidity Sensor

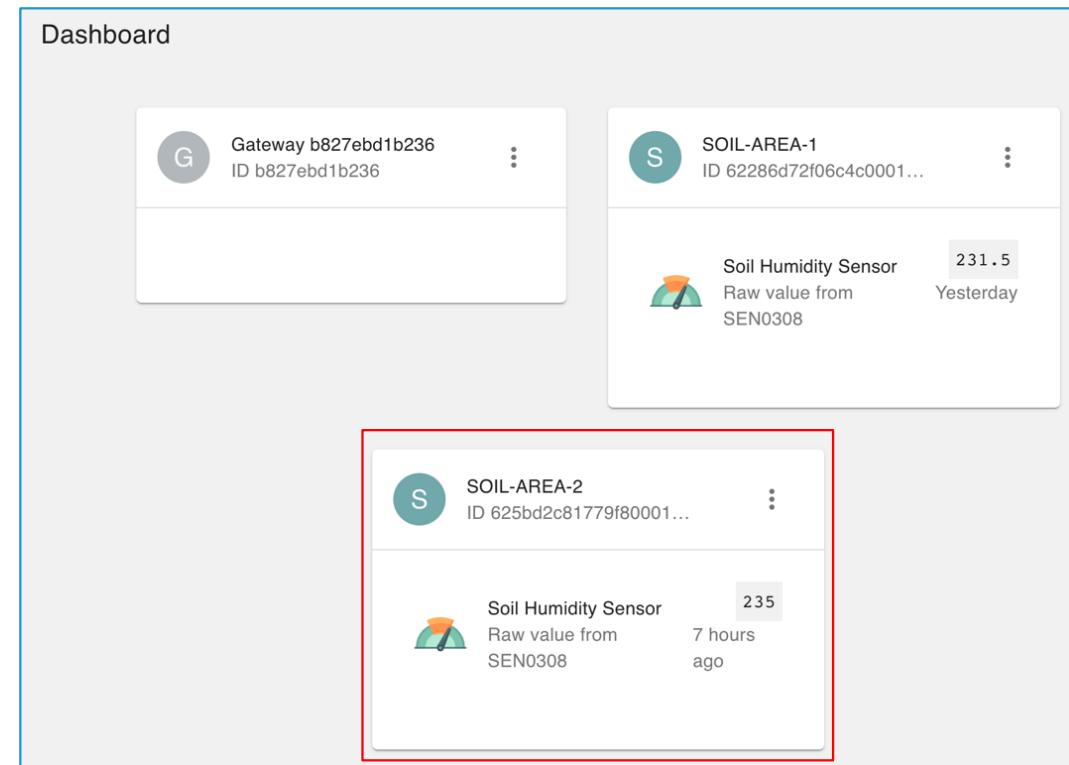

Devices / SOIL-AREA-2 / Sensors / Soil Humidity Sensor

SENSOR READINGS • SETTINGS

Set sensor kind, quantity and unit

Sensor Kind: Raw value from SEN0308

SAVE RESET

Dashboard

G Gateway b827ebd1b236 ID b827ebd1b236 ...

S SOIL-AREA-1 ID 62286d72f06c4c0001... 231.5 Yesterday

Soil Humidity Sensor Raw value from SEN0308

S SOIL-AREA-2 ID 625bd2c81779f80001... 235

Soil Humidity Sensor Raw value from SEN0308 7 hours ago

- The dashboard now displays correctly the new device with its sensor

2/ To have several tensiometer soil sensor devices

- Only to have several tensiometer soil devices on 1 Wazigate – change the device address in the soil device Arduino code

## **Default address for tensiometer sensor is**

```
{ 0x26, 0x01, 0x1D, 0xB1 };
```

**Just increase the last byte**

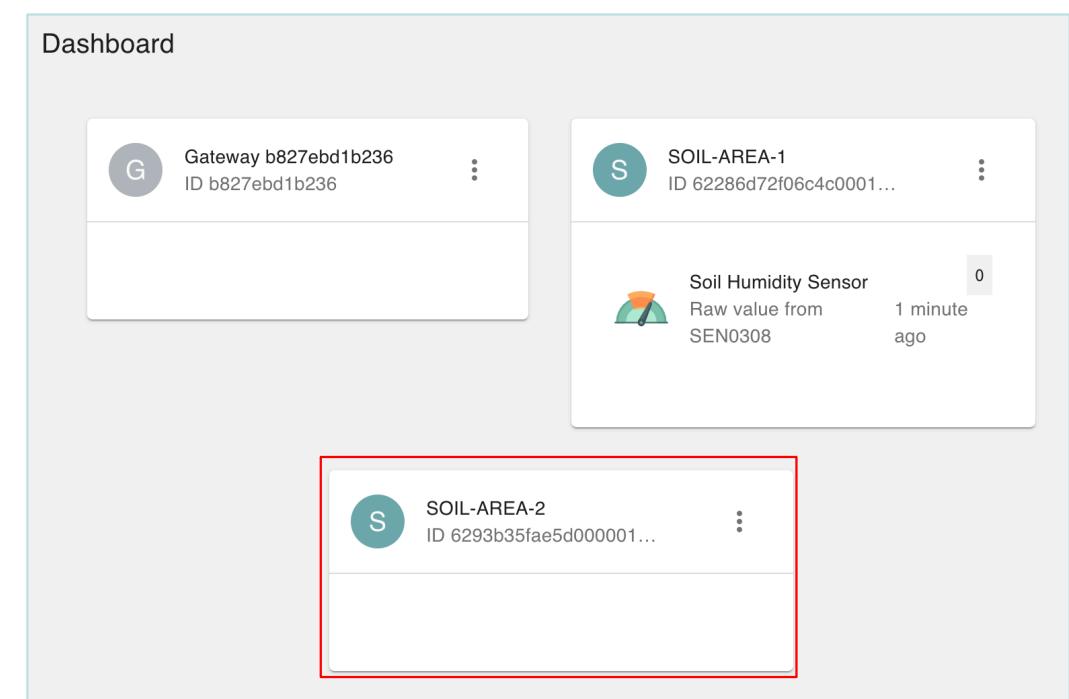

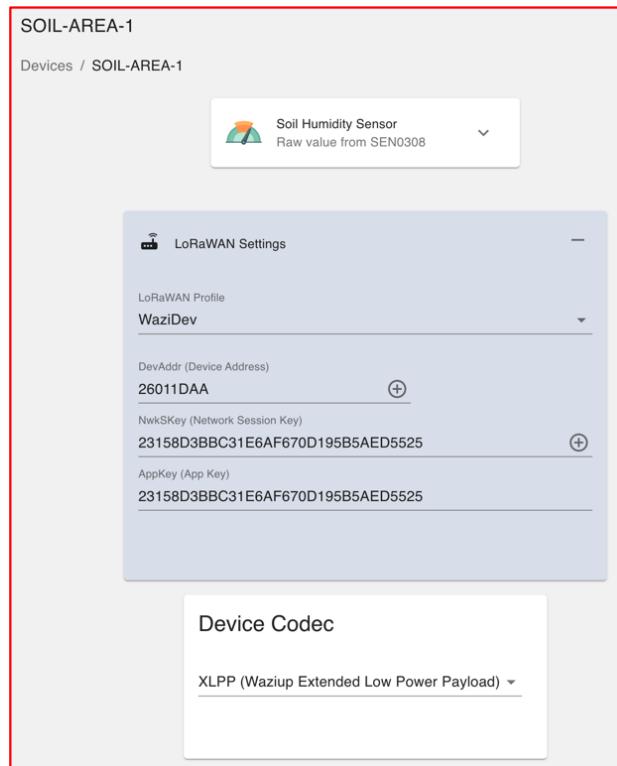

```
{ 0x26, 0x01, 0x1D, 0xB2 };
```

# Compile and upload the code to the soil sensor device

# Advanced configuration

## 2/ To have several tensiometer soil sensor devices, con't

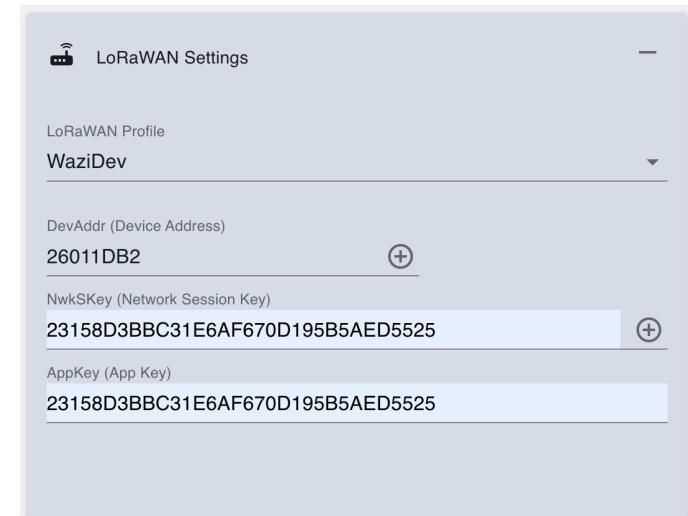

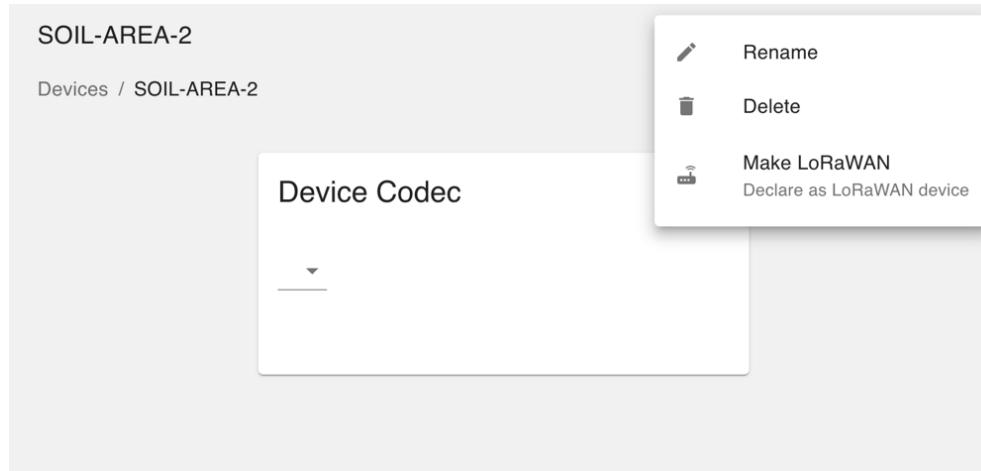

- Left figure shows configuration of the default soil sensor device
- Create a new device, e.g. SOIL-AREA-2
- Limit device name to 12 characters for correct display on OLED

# Advanced configuration

2/ To have several tensiometer soil sensor devices, con't

- Select the new device and make it as LoRaWAN device

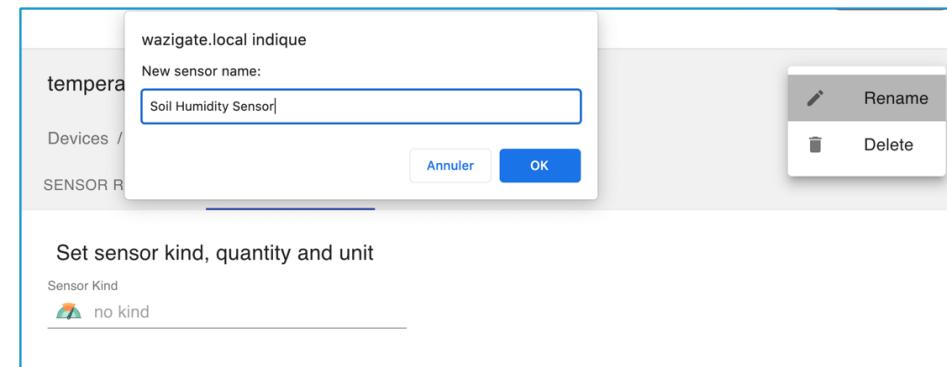

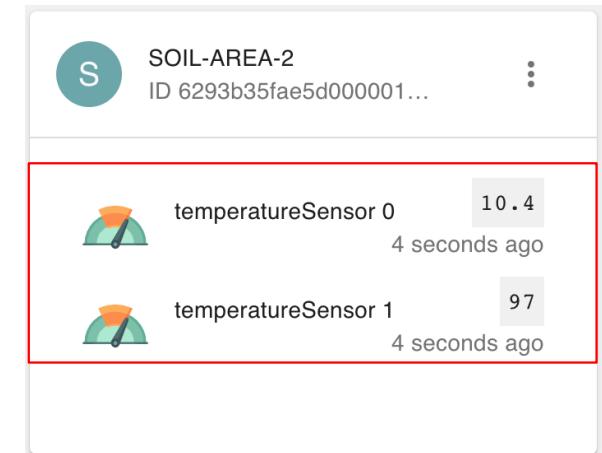

- Set the new address, **matching the one of the Arduino code**: 26011DB2
- keep same encryption keys
- Select XLPP as codec

# Advanced configuration

## 2/ To have several tensiometer soil sensor devices, con't

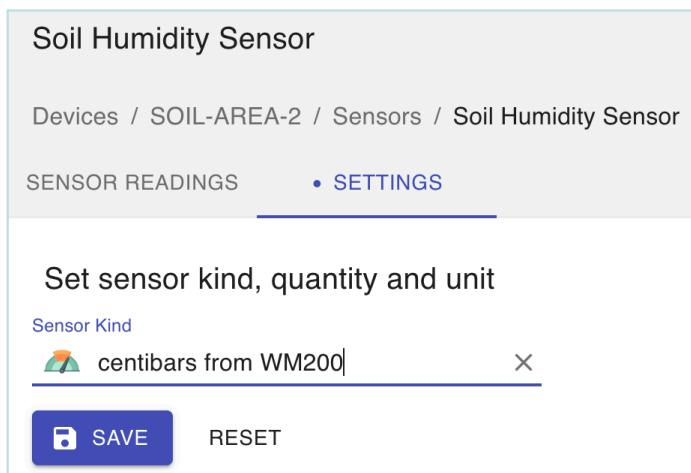

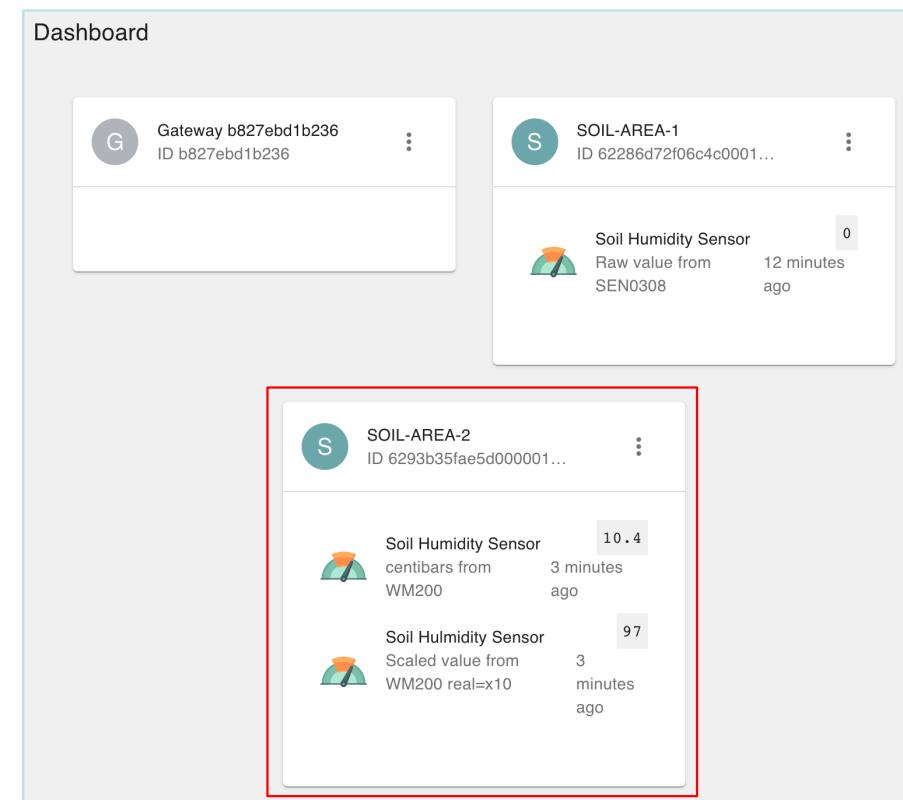

- DO NOT manually create a sensor. Instead,...
- ... power on the new soil sensor device for data transmission
- Refresh the WaziGate dashboard, the new data should appear
- There should be 2 new sensor names
  - "temperatureSensor\_0" & "temperatureSensor\_1"
- Click on "temperatureSensor\_0" and then rename it, e.g. "Soil Humidity Sensor"
- Do the same for "temperatureSensor\_1"

# Advanced configuration

2/ To have several tensiometer soil sensor devices, con't

- For first sensor, change Sensor kind to "centibars from WM200"
- For second sensor, use "Scaled value from WM200 real=x10"

Device	Sensor Type	Value	Timestamp
SOIL-AREA-2	Soil Humidity Sensor (centibars from WM200)	10.4	3 minutes ago
SOIL-AREA-2	Soil Hulmidity Sensor (Scaled value from WM200 real=x10)	97	3 minutes ago

- The dashboard now displays correctly the new device with its sensors

# Advanced configuration

## 1&2 / To have several soil sensor devices, end

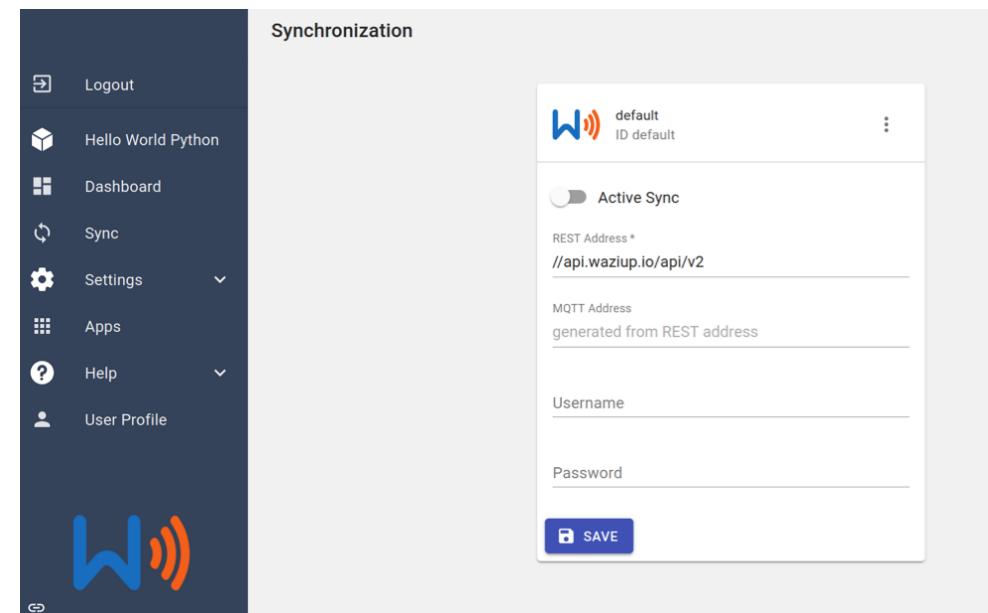

- When there are more than 2 devices declared on the WaziGate, the OLED screen will cycle sequentially through all of them
  - Main screen device 1 (5s) -> screen saver device 1 (12s) ->
  - Main screen device 2 (5s) -> screen saver device 2 (12s) -> ...
- For the OLED **to detect correctly the devices**, the sensor name (here "Soil Humidity Sensor") or the sensor kind (here "Raw value from SEN0308") **MUST contain "SEN0308" or "WM200"** for respectively a capacitive or a tensiometer sensor

# Advanced configuration

## 3/ To sync WaziGate and its devices to the cloud

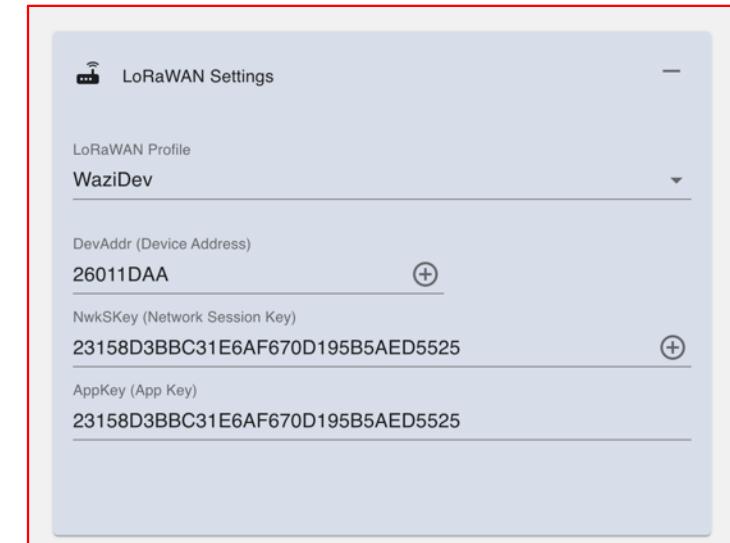

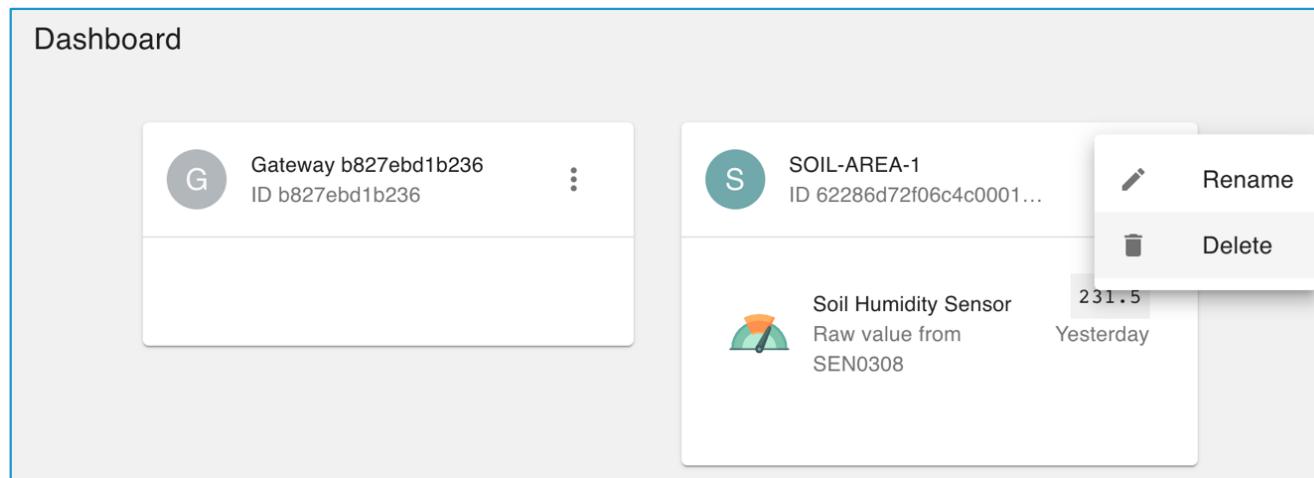

- If you want to sync your WaziGate to the WAZIUP Cloud, look at this tutorial page to see what it means
  - <https://www.waziup.io/documentation/wazigate/v2/install/#registration-with-the-cloud>
  
- You will need an account on WAZIUP Cloud dashboard
- If you don't have one, you need to create one first
- <https://dashboard.waziup.io/>

# Advanced configuration

## 3/ To sync WaziGate and its devices to the cloud, con't

- We need to replace the default sensor, but first...
- ... copy the encryption keys of the default sensor
- Then, delete the default device

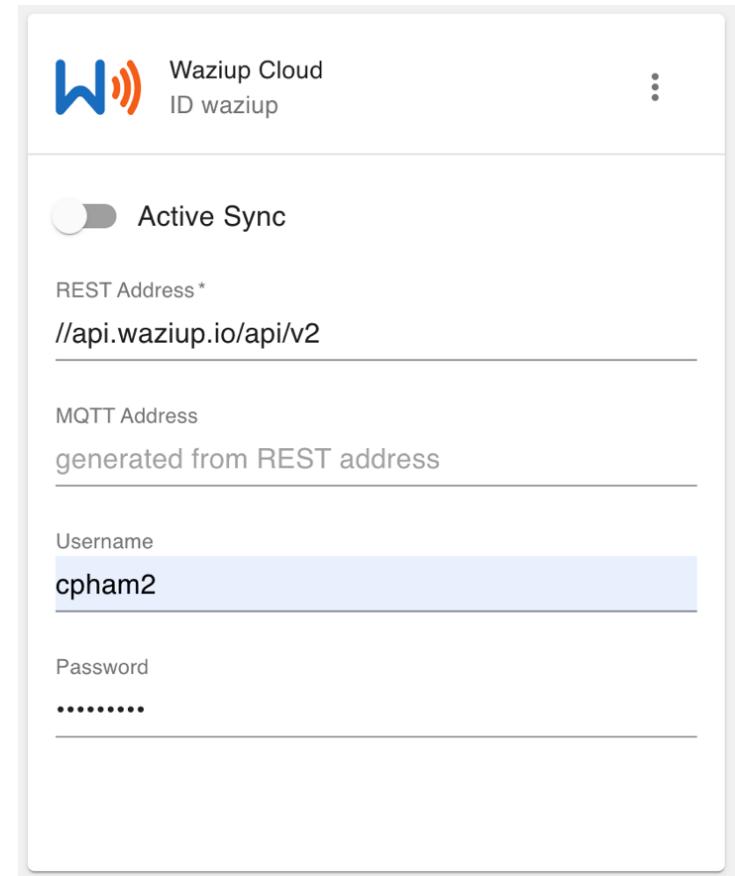

The dashboard shows two main components:

- Gateway b827ebd1b236 ID b827ebd1b236**: A card with a 'G' icon.
- SOIL-AREA-1 ID 62286d72f06c4c0001...**: A card with an 'S' icon. It includes a 'Soil Humidity Sensor' icon, a raw value of '231.5' from 'SEN0308' yesterday, and options to 'Rename' or 'Delete'.

# Advanced configuration

## 3/ To sync WaziGate and its devices to the cloud, end

- Now, proceed as for creating a new sensor, e.g. SOIL-AREA-1
- See slides 32-35
- BUT, keep the configuration of the default sensor
  - Device address: 26011DAA
  - Copy/paste the encryption key
- Finally, enter your WAZIUP account credential in the sync menu
- And enable "Active Sync"
- Log in the WAZIUP Cloud dashboard and check that you see your gateway and your device

# Advanced configuration

## 4/ Use 868MHz frequency band

- The default SD card image uses EU433 frequency band
- To set to 868MHz, use the auto-configuration mechanism
  - <https://github.com/CongducPham/PRIMA-Intel-Irris/tree/main/Gateway/boot#auto-configuration-on-boot-for-the-intel-irris-wazigate>

### Example 1: set INTEL-IRRIS WaziGate in 868MHz version

- flash the INTEL-IRRIS WaziGate SD card image
- insert the SD card in any computer (Windows, Linux, MacOS)
- open the `boot` drive that should appear on your computer
- download from INTEL-IRRIS GitHub (`Gateway/boot`) `intel-irris-band-868.txt` to be copied into the `boot` drive as `intel-irris-band.txt`
- be sure that there is no `intel-irris-auto-config.done` file in the `boot` drive, otherwise delete the file
- safely eject the `boot` drive
- insert the SD card in the RPI and power the RPI

# Advanced configuration

## 5 / Execute automatic custom device configuration

- The default SD card image defines 1 capacitive sensor
- To add/change devices, use the auto-configuration mechanism
  - <https://github.com/CongducPham/PRIMA-Intel-Irris/tree/main/Gateway/boot#auto-configuration-on-boot-for-the-intel-irris-wazigate>

### Example 4: have the INTEL-IRRIS WaziGate working with a customized setting

- flash the INTEL-IRRIS WaziGate SD card image
- insert the SD card in any computer (Windows, Linux, MacOS)
- open the `boot` drive that should appear on your computer
- download from INTEL-IRRIS GitHub (`Gateway/boot`) `create-custom-example/intel-irris-auto-config.sh` and see how the script creates one capacitive and one tensiometer device (SOIL-AREA-1/26011DAA and SOIL-AREA-2/26011DB1)
- based on this example, you can create on your computer an `intel-irris-auto-config.sh` script that actually creates and configures devices according to your setting
- copy the file into the `boot` drive as `intel-irris-auto-config.sh`
- be sure that there is no `intel-irris-auto-config.done` file in the `boot` drive, otherwise delete the file
- safely eject the `boot` drive
- insert the SD card in the RPI and power the RPI

# NOTICE ON THE STARTER-KIT

- NEVER TRANSMIT WITHOUT AN ANTENNA
- 1 FULLY ASSEMBLED & CONFIGURED SOIL SENSOR
  - NEED TO INSTALL 2-AA BATTERIES
  - TAKE HIGH-GRADE BATTERIES
  - DO NOT SWITCH ON WITHOUT ANTENNA ATTACHED
  - ALREADY CONFIGURED FOR WAZIGATE
- STARTER-KIT= 1 SOIL SENSOR + 1 WAZIGATE
- INTEL-IRRIS WAZIGATE IMAGE TO BE DOWNLOADED FROM <http://intel-iris.eu/results>
- FLASH IMAGE ON 8GB SD CARD (OR 16GB OR 32GB)
- THE WAZIGATE IS ONLY PRE-CONFIGURED FOR 1 SOIL SENSOR PER FARM
- STARTER-KIT TUTORIAL : <http://intel-iris.eu/tutorials-slides>
